No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1994 articles are as shown on the article title page; if no fee code appears on the title page, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

# Contents of Volume 127

## Number 1, May 1994

JEAN M. LEBEAU, FRANCIS J. LIUZZI, ALISON S. DEPTO, AND AARON I. VINIK. Differential Laminin Gene Expression in Dorsal Root Ganglion Neurons and Nonneuronal Cells .... 1

X. ZHANG, Å. DAGERLIND, L. BAO, R. R. JI, J. M. LUNDBERG, AND T. HÖKFELT. Increased Expression of Galanin in the Rat Superior Cervical Ganglion after Pre- and Postganglionic Nerve Lesions .... 9

Q. YAN, C. MATHESON, J. SUN, M. J. RADEKE, S. C. FEINSTEIN, AND J. A. MILLER. Distribution of Intracerebral Ventricularly Administered Neurotrophins in Rat Brain and Its Correlation with Trk Receptor Expression .... 23

PAOLO FOLLESA, KAREN GALE, AND ITALO MOCCHETTI. Regional and Temporal Pattern of Expression of Nerve Growth Factor and Basic Fibroblast Growth Factor mRNA in Rat Brain Following Electroconvulsive Shock .... 37

D. P. GAUDIN, J. A. ST-PIERRE, B. LAVOIE, AND P. J. BÉDARD. Transsynaptic Effect of an Intrastriatal Fetal Nigral Graft on the Sensitivity of the Substantia Nigra Pars Reticulata to Muscimol in the Rat .... 45

ALESSANDRO ZUDDAS, FLAVIA FASCETTI, GIOVANNI U. CORSINI, AND MARIA PAOLA PICCARDI. In Brown Norway Rats, $MPP^+$ Is Accumulated in the Nigrostriatal Dopaminergic Terminals but It Is Not Neurotoxic: A Model of Natural Resistance to MPTP Toxicity .... 54

OSAMU SHIRAKAWA AND CAROL A. TAMMINGA. Basal Ganglia $GABA_A$ and Dopamine $D_1$ Binding Site Correlates of Haloperidol-Induced Oral Dyskinesias in Rat .... 62

MOLLY V. WAGSTER, JOHN C. HEDREEN, CAROL E. PEYSER, SUSAN E. FOLSTEIN, AND CHRISTOPHER A. ROSS. Selective Loss of [$^3$H]Kainic Acid and [$^3$H]AMPA Binding in Layer VI of Frontal Cortex in Huntington's Disease .... 70

MARY BARTLETT BUNGE, VICKY R. HOLETS, MARGARET L. BATES, THERESA S. CLARKE, AND BRANT D. WATSON. Characterization of Photochemically Induced Spinal Cord Injury in the Rat by Light and Electron Microscopy .... 76

G. R. DAVIS, JR., AND ANDREW D. MCCLELLAN. Long Distance Axonal Regeneration of Identified Lamprey Reticulospinal Neurons .... 94

SIEGFRIED W. SCHOEN AND GEORG W. KREUTZBERG. Synaptic 5′-Nucleotidase Activity Reflects Lesion-Induced Sprouting within the Adult Rat Dentate Gyrus .... 106

ASHFAQ SHUAIB, SADIQ IJAZ, RIDA MAZAGRI, JAY KALRA, SUSAN HEMMINGS, A. SENTHILSVLVAN, AND NANCY CROSBY. Hypothyroidism Protects the Brain during Transient Forebrain Ischemia in Gerbils .... 119

MARTIN GRABOWSKI, BARBRO B. JOHANSSON, AND PATRIK BRUNDIN. Survival of Fetal Neocortical Grafts Implanted in Brain Infarcts of Adult Rats: The Influence of Postlesion Time and Age of Donor Tissue .... 126

JEAN HIEBERT AND PETER G. SMITH. Autonomic and Sensory Reinnervation of Smooth Muscle Transplanted to the Anterior Chamber of the Eye: Effect of Target Postnatal Age .... 137

9 813HI XL 1332
12/94 31249-200

WAYNE W. LIOU AND HARRY G. GOSHGARIAN. Quantitative Assessment of the Effect of Chronic Phrenicotomy on the Induction of the Crossed Phrenic Phenomenon ..... 145

DORIS B. WILSON AND DARLENE P. WYATT. Analysis of Neurulation in a Mouse Model for Neural Dysraphism ..... 154

MIRA KOWALSKA AND JOHN F. DISTERHOFT. Relation of Nimodipine Dose and Serum Concentration to Learning Enhancement in Aging Rabbits ..... 159

## Number 2, June 1994

*Brief Communication*

J. E. SPRINGER, X. MU, L. W. BERGMANN, AND J. Q. TROJANOWSKI. Expression of GDNF mRNA in Rat and Human Nervous Tissue ..... 167

*Regular Articles*

CHRISTIAN HUMPEL, MAIBRITT M. J. GIACOBINI, CYNTHIA WETMORE, AND LARS OLSON. Brain-Derived Neurotrophic Factor and *trk*B Receptor mRNAs in Grafts of Cortex Cerebri ..... 171

MARIA ANTONIETTA TRIA, MARIA FUSCO, GUIDO VANTINI, AND ROBERTA MARIOT. Pharmacokinetics of Nerve Growth Factor (NGF) Following Different Routes of Administration to Adult Rats ..... 178

MARION MURRAY, KATHLEEN BOZEK, AND FORREST HAUN. Transient and Permanent Patterns of Expression of the Low-Affinity Neurotrophin Receptor in the Interpeduncular Nucleus of the Rat ..... 184

TAKESHI KONDOH AND WALTER C. LOW. Glutamate Uptake Blockade Induces Striatal Dopamine Release in 6-Hydroxydopamine Rats with Intrastriatal Grafts: Evidence for Host Modulation of Transplanted Dopamine Neurons ..... 191

J. C. SØRENSEN, K. ØSTERGAARD, AND J. ZIMMER. Grafting of Dopaminergic Ventral Mesencephalic Slice Cultures to the Striatum of Adult Rats ..... 199

REIN ANTON, JEFFREY H. KORDOWER, NIGEL T. MAIDMENT, JACOB S. MANASTER, DARCI J. KANE, SHAHROOZ RABIZADEH, SHERRY B. SCHUELLER, JIE YANG, SHERVIN RABIZADEH, ROBERT H. EDWARDS, CHARLES H. MARKHAM, AND DALE E. BREDESEN. Neural-Targeted Gene Therapy for Rodent and Primate Hemiparkinsonism ..... 207

LAUREN C. COSTANTINI, BRENDA M. VOZZA, AND ABIGAIL M. SNYDER-KELLER. Enhanced Efficacy of Nigral–Striatal Cotransplants in Bilaterally Dopamine-Depleted Rats: An Anatomical and Behavioral Analysis ..... 219

ALMUDENA RAMÓN-CUETO AND MANUEL NIETO-SAMPEDRO. Regeneration into the Spinal Cord of Transected Dorsal Root Axons Is Promoted by Ensheathing Glia Transplants . 232

KARL J. BERTRAM, MICHAEL T. SHIPLEY, MATTHEW ENNIS, PAUL R. SANBERG, AND ANDREW B. NORMAN. Permeability of the Blood–Brain Barrier within Rat Intrastriatal Transplants Assessed by Simultaneous Systemic Injection of Horseradish Peroxidase and Evans Blue Dye ..... 245

KEN-ICHIRO FUKUCHI, DENNIS D. KUNKEL, PHILIP A. SCHWARTZKROIN, KOUZIN KAMINO, CHARLES E. OGBURN, CLEMENT E. FURLONG, AND GEORGE M. MARTIN. Overexpression of a C-Terminal Portion of the β-Amyloid Precursor Protein in Mouse Brains by Transplantation of Transformed Neuronal Cells ..... 253

ARNEL M. PALLERA, JOHN B. SCHWEITZER, ADAM A. BOOK, AND RONALD G. WILEY. 192 IgG–Saporin Causes a Major Loss of Synaptic Content in Rat Olfactory Bulb ..... 265

CYNTHIA WEICHMAN, PAMELA MCMURRAY, GRACE KNUTTINEN, PETER MUDD, ELISABETH A. FOLEY, AND STANLEY FINGER. Holeboard Performance of Rats after Hippocampal Lesions and Treatment with Nimodipine ..... 278

PETER M. BRIDGE, DOUGLAS J. BALL, SUSAN E. MACKINNON, YASUSHI NAKAO, KEITH BRANDT, DANIEL A. HUNTER, AND CATHERINE HERTL. Nerve Crush Injuries—A Model for Axonotmesis ..... 284

KAORU SAKATANI, ABU Z. HASSAN, AND MITCHELL CHESLER. Effects of GABA on Axonal Conduction and Extracellular Potassium Activity in the Neonatal Rat Optic Nerve.... 291

*Author Index for Volume 127* ..... 298

NOTICE

The Subject Index for Volume 127 will appear in the December 1994 issue as part of a cumulative index for the year 1994.

# EXPERIMENTAL NEUROLOGY

A Journal of Neuroscience Research

## Information for Authors

*Experimental Neurology* publishes the results and conclusions of original research in neuroscience with a particular emphasis on novel findings in neural development, regeneration, plasticity, and transplantation. Emphasis is also placed on basic mechanisms underlying or related to neurological disorders. Although the journal does not consider case reports for publication, information that bridges basic and clinical questions is of a high priority. Brief communications of important new data and scholarly reviews of important questions will be considered for publication. Manuscripts in other areas of neuroscience will be considered if they show relevance to the primary mission of the journal. Policy regarding publication of experiments on unanesthetized animals conforms with the standards for use of laboratory animals established by the Institute of Laboratory Animal Resources, U.S. National Academy of Sciences. Experiments in which curariform agents are used must be justified and details as to steps taken to reduce or avoid distress to the animal must be provided, particularly with regard to electrical stimulation. Exposition must be as brief as is consistent with accuracy and clarity. Lengthy bibliographic lists should be avoided.

**Manuscript Submission.** Submit the original manuscript and three copies. These will **not** be returned to the author. One original glossy print of each illustration is required, along with three photocopies or laser copies. Four original glossy prints should be provided if machine copies are not clear and sharp. **These prints will not be returned to the author.** Submissions should be sent to:

John R. Sladek, Jr., Ph.D.
Editor-in-Chief, *Experimental Neurology*
The Neuroscience Institute
University of Health Sciences/
The Chicago Medical School
3333 Green Bay Road
North Chicago, Illinois 60064-3095

Telephone: (708) 578-3000

Manuscripts are accepted for editorial review with the understanding that the content has not been published previously except as a preliminary report and is not submitted elsewhere for publication. **Furthermore, it is understood that they will have received the appropriate clearance and the approval of all authors necessary for publication prior to submission.** Articles and any other materials published in *Experimental Neurology* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors or Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Consideration for Publication.** Each manuscript received by the editorial office is screened initially by a member of the Editorial Board in order to judge its relevancy to the interests of the journal. Those constributions judged to be of sufficient interest then are assigned to one or more reviewers who are asked to provide both a critique and priority rating.

**Cover Photographs.** Authors are encouraged to submit potential cover photographs for consideration directly to the Editor at the time of submission of a manuscript.

**Preparation of Manuscript.** Prepare typewritten or word-processed manuscripts double-spaced throughout, including abstract, acknowledgments, and references, on one side of 8.5 × 11-inch (21.6 × 28-cm) or A4 white paper and in *Experimental Neurology* format. Number the pages consecutively. All authors are encouraged but not restricted to limit the length of manuscripts submitted to about 20 pages (21.6 × 28 cm), double-spaced, including tables and figures (about 6 printed pages).

*Page 1* should contain the article title, authors' names, and complete affiliations. At the bottom of page 1 place any footnotes to the title, indicated by superscript *, †, ‡. *Key words* should also be included at the bottom of this page. Ideally, 6–8 identifiers should be provided to aid the indexing and review process. *Page 2* should contain a proposed running head (abbreviated form of the title) of less than 50 characters, the name, mailing address, and telephone number and/or fax number of the author to whom proofs should be sent, and a short abstract. The *abstract* should be a summary of the problem, the methods, and the results and their significance in a single paragraph of 250 words or less.

Most recommendations of the Council of Biology Editors are to be followed; consult the *CBE Style Manual,* 5th ed. (Council of Biology Editors, 9650 Rockville Pike, Bethesda, MD 20814). Follow *Webster's New International Dictionary,* Third Edition, Unabridged (1986) for spelling and division of words. Nonstandard abbreviations should be minimal. Use numerals with standard units of measurement and for any number above nine. The metric system must be used and abbreviations made according to the International System (*Standard Metric Practice Guide,* American Society for Testing Materials, Philadelphia, 1970).

**Brief Communications.** Short manuscripts of no more than 6 or 7 double-spaced typed pages and limited to 1 figure and/or table (approximately 2 printed pages) will be considered. They should have an abstract of a few sentences, but no section headings.

**Critical Reviews.** Authors should first communicate with the Editor-in-Chief describing the topic and intent of potential review articles prior to submission to the journal. Reviews should emphasize emerging fields or should critically analyze existing data and questions. At the discretion of the Editor-in-Chief these reviews may be accompanied by scientific dialogue from other contributions.

**Illustrations.** Number figures with Arabic numerals in order of appearance in the text. Type all legends consecutively on a separate sheet. Plan all figures to fit the proportions of the printed page (7 1/8 × 9 in.; 18.2 × 23 cm). All illustrations should be in finished form suitable for reproduction and no larger than 8.5 × 11 in. (21.6 × 28 cm). Identify all figures on the back lightly *in soft pencil* with the author(s) name(s) and figure number; indicate the TOP. Each component of a composite figure should be lettered consistently on the lower or upper left face and referred to in text and caption.

Lettering on drawings should be of professional quality or generated by *high-resolution computer* graphics and should be large enough (10–12 points) to take a reduction of 50 to 60%. Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made in black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality computer* graphics may be acceptable. Symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction. Plot graphs on blue coordinate or white paper. Grid lines that are to reproduce must be shown in black. All drawings may be submitted as glossy prints. Photocopies submitted as original artwork are not acceptable.

Halftone photographs should be on glossy paper and as rich in contrast as possible. Only those parts of the photograph that are necessary to illustrate the matter under discussion should be submitted. Areas that are not essential should be cut off. For best reproduction provide clear, sharp, glossy prints with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction.

Illustrations in color can be accepted only if the authors defray the cost. If mounting is necessary, color figures must be mounted on 10- to 12-point *flexible* illustration board or paper due to the nature of the reproduction process.

**Tables.** Organize tables horizontally on the page if possible. Tables should be numbered consecutively with Arabic numerals in order of appearance in the text and collected at the end of the manuscript. Type each table double-spaced on a separate page with a short descriptive caption directly above the table and with any necessary footnotes (indicated by superscript lowercase *italic* letters) typed directly below the table.

**References.** Use numerals in parentheses in the text. List references alphabetically and number consecutively, but do not incorporate "personal communications" or "unpublished observations" into this list. Abbreviations of journal titles should conform to *Index Medicus,* a complete list of which appears in its December issue. Note below some examples of punctuation and format for *Experimental Neurology.*

1. BÉDARD, P. J., R. BOUCHER, AND T. DI PAOLO. 1990. Effect of dopamine $D_1$ and $D_2$ receptor stimulation in MPTP monkeys. In *Disorders of Movement* (N. Quinn and P. Jenner, Eds.), pp. 187–192. Academic Press, London.
2. BRODAL, A. 1981. *Neurological Anatomy in Relation to Clinical Medicine,* 3rd ed. Oxford Univ. Press, New York.
3. VACA, K., AND E. WENDT. 1992. Divergent effects of astroglial and microglial secretions on neuron growth and survival. *Exp. Neurol.* **118:** 62–72.

**Proofs.** Two sets of proofs and the original manuscript are sent to the author designated to receive them. To avoid delay in publication, only necessary changes should be made, and proofs and manuscript should be returned promptly. Authors will be charged for alterations that exceed 10% of the total cost of composition.

**Reprints.** Fifty reprints without covers will be provided free of charge to the corresponding author. Additional reprints may be ordered using the form included with the proofs.

**Personal Computer Disks.** Manuscripts may be submitted to *Experimental Neurology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).
